E2EE - Installation

Prerequisites

> You need access to the server running ownCloud in order to install the E2EE app.

- ownCloud 10 Installation with following optional apps installed:
    - **Activity**: https://marketplace.owncloud.com/apps/activity - to be able to view E2EE related events in the activity log
    - **Guests**: https://marketplace.owncloud.com/apps/guests >= 0.5 - to be able to share with guests by email address, i.e. users that do not have an account on the ownCloud Server

Community

Unfortunately, the market place can install e2ee directly only with an active enterprise license. But you can download the latest version from https://marketplace.owncloud.com/apps/e2eeshare and install it manually in apps-external or apps:

```
# Download to ~/Downloads, then (as root) do:
cd /var/www/owncloud/apps-external
tar -xzf ~/Downloads/e2eeshare-*.tgz
```

Enterprise

To enable/install these go to:
	You will find the guest app unter "Collaboration"	And the activity app can be found under "tools"

The Trashbin (files_trashbin) and Versioning (files_versions) apps do not work with e2ee files. Unencrypted files are still supported.

Installation

You can find the newest E2ee release in the market place:

If you have problems using the marketplace app, you can also download the version from https://marketplace.owncloud.com/apps/e2eeshare and install it manually.

Demo License Key

You can test E2ee using http(s)://localhost or http(s)://localhost/owncloud for up to 10 users. If you need any other domains for testing, please contact sales@epikshare.com with the exact URL you want to test with.

Download

Download the latest e2eeshare version from https://marketplace.owncloud.com/apps/e2eeshare

If you have ownCloud enterprise you can use the marketplace to install the current version of e2ee-share.

Manual Installation

1. Find you apps folder within your ownCloud installation (Linux: /var/www/owncloud/apps-external)

2. Unzip the e2eeShare package into this folder:

```
cd /var/www/owncloud/apps-external
tar -xzf ~/Downloads/e2eeshare-*.tgz
```

3. Verify that the zip is successfully extracted:

```
   owncloud
    apps-external
   ...
        e2eeshare
   |    |    ajax
             appinfo
             controller
             css
             db
             img
             js
             l10n
             lib
             templates
   ...
```

4. Login to ownCloud as the admin user. You might be asked for an upgrade, if the E2EE app was installed before.

Administration Setup

1. Open the Admin Settings and visit the

   🔒 Encryption

   section. Enter your license key in the provided text area:

   License Key

   ```
   -----BEGIN LICENSE-----

   -----END LICENSE-----
   ```

   Change license
   Your license is active until May 7, 2020

   > For trial purposes e2ee includes a valid license for localhost. If you want to try it out on a real environment you can request a demo license by providing your owncloud url (before the index.php)

2. Select, which key storages will be available for your users. You may provide different settings for ownCloud and guest users.

Key Storage

Select below which private key storages are provided for e2ee Users.

ownCloud Users

☐ User's Computer/Device

☑ External Key/Smartcard

☑ Manual input for each download

☑ Local decryption, download only

Guest Users

☑ User's Computer/Device

☐ External Key/Smartcard

☑ Manual input for each download

☑ Local decryption, download only

> If you provide more than one key storage options, users have to set up their key storage in their personal settings prior to being able to read and save encrypted files. This must be communicated in advance to avoid any confusion.

3. By default all users are enabled to use the E2ee app. If you want to restrict usage to specific groups only, you may set them in the *Authorized Groups* section. If you provide one or more groups here, only members of those groups may set a folder as E2ee encrypted. Click the apply button, when you are done.

Authorized Groups

× admin

By default all users are enabled to user the E2ee app.

If you provide one or more groups here, only members of those groups may set a folder as E2ee encrypted.

(guests and E2EE enabled (virtual group) are virtual groups and cannot be selected).

Apply E2ee Groups

4. If you have the Guests app installed, make sure e2eeshare is added to the app whitelist. The Guests app is found in the

◁ Sharing

section.

Guests

Guest users are grouped under a virtual group in the user manager

Group name | guests

☑ Limit guest access to an app whitelist

settings,avatar,files_external,files_trashbin,files_versions,files_sharing,files_texteditor,activity,firstrunwizard,gallery,notifications,e2eeshare

Reset whitelist

FAQ

I got a valid license, but when installing it, I still get a message that the system is unlicensed.

This usually happens, when you did not specify correct URL(s) for your license keys. Make sure to send us the exact URL(s) the system will be visible from (i.e. https://example.com/owncloud) -> basically everything before *index.php*. If you plan to use different URLs for the same installation make sure to send us all of them.

Are there any file size limitations?

Short Answer: no
- 6 -

Long Answer: It depends on your browser, operating system and available RAM. Since the en-/decryption takes place in your browser the file needs to fit within the available memory. Depending on you configuration it should not be a problem sharing files > 2GB although the additional en-/decryption process might require you to wait for quire some time.

How long do you have to wait to have a file de-/encrypted?

De-/Encryption times for small files (<20MB) are barely noticeable on modern systems or even mobile devices. The larger the file gets the more noticeable is the wait after downloading (or before upload starts) - always depending on your hardware.
